

Cybersecurity. The Internet of Things.

October 11, 2017

Suggestions from the Future: live innovations from the coming decade. This was discussed at FBK by Riccardo Meggiato, a writer and cybersecurity expert.

On Wednesday, October 4, 2017, trento-based FBK hosted a talk on the Internet of Things (IoT) and Cybersecurity during a meeting organized by [ManagerItalia](#), the organization representing 629 managers in the business, transportation, tourism, services, and tertiary industries based in Trentino-Alto Adige. Brilliant and effective, **Riccardo Meggiato** explained to attending managers what IoT – at the heart of industry 4.0 – is, where the connection to the web is extended to all home and business technologies, with the possibility to receive real-time usage statistics, and to control each piece of equipment (e.g. the blast furnace in a metallurgical power plant can be remotely controlled and its efficiency estimated at any given point). Closely related to the Internet of things is **cybersecurity**; threats to it cost Italian companies 9 billion every year and the trend is growing. “Fortunately,” **Meggiato** says, “tools are being developed to limit damage.”

Organized by [ManagerItalia](#) Trentino Alto-Adige
Trento Headquarters, ph. 0461235499 – trento@manageritalia.it

[Manageritalia Trentino-Alto Adige](#)

is the entity representing 629 managers in the business, transport, tourism, services, and tertiary industries in Trentino-Alto Adige.

Interview by M. Lucianer (journalist, FBK) released on 10/4/2017 at FBK in Trento (IT)
