

ECT* - the new website is online

September 2, 2020

Developed during the lockdown, it has been designed according to an innovative logic that includes remote events

The new website for ECT*, the European Center for Theoretical Studies in Nuclear Physics and Related Areas, is online.

Designed by <u>Francesca Guerzoni</u> in collaboration with the ECT* staff during the lockdown and in the following months, it offers contents relating to the various activities of the Center but also a section set up according to a new perspective, which includes remote events.

When browsing the site, users can quickly see, thanks to a specification to the side of the title, if the <u>workshops</u> and <u>seminars</u> are in-person or virtual events and, in the latter case, if the video of the recording is available. Additionally, all ECT* virtual events are can be found in a dedicated playlist.

Furthermore, a section dedicated to the Colloquia, i.e. scientific introductions to the workshops to be held in 2021, has been introduced. The videos are published on the ECT* youtube channel in

the relating playlist where visitors can already see the first Colloquium.

Furthermore, under the section <u>Other Colloquia</u> visitors can follow the events of other international organizations, such as the Arizona State University.

On the **ECT* youtube channel**, users can also find, in addition to the Colloquia videos, **online** webinar and Workshop videos.

Useful information on the Center can be found in the <u>About us</u> section and in the sections relating to Research activities and the <u>Doctoral Training Program</u>
