

ECT* – the new website is online

September 2, 2020

Developed during the lockdown, it has been designed according to an innovative logic that includes remote events

The [new website for ECT*](#), the **European Center for Theoretical Studies in Nuclear Physics and Related Areas**, is online.

Designed by [Francesca Guerzoni](#) in collaboration with the ECT* staff during the lockdown and in the following months, it offers contents relating to the various activities of the Center but also a section set up according to a new perspective, which includes remote events.

When browsing the site, users can quickly see, thanks to a specification to the side of the title, if the [workshops](#) and [seminars](#) are in-person or virtual events and, in the latter case, if the video of the recording is available. Additionally, all [ECT* virtual events are can be found in a dedicated playlist](#).

Furthermore, a section dedicated to the Colloquia, i.e. scientific introductions to the workshops to be held in 2021, has been introduced. The videos are published on the [ECT* youtube channel in](#)

[the relating playlist](#) where visitors can already see the [first Colloquium](#).

Furthermore, under the section [Other Colloquia](#) visitors can follow the events of other international organizations, such as the Arizona State University.

On the [ECT* youtube channel](#), users can also find, in addition to the Colloquia videos, [online webinar](#) and [Workshop](#) videos.

Useful information on the Center can be found in the [About us](#) section and in the sections relating to [Research](#) activities and the [Doctoral Training Program](#)
