Online daycare enrollment with the “Simpatico” project coordinated by FBK

September 12, 2017

New opportunity for families in Trento. Intelligent tools that reduce

Thanks to the participation of the **City of Trento** in the

“Simpatico” European project coordinated by **Fondazione Bruno Kessler**, an o**nline form has been developed to facilitate families with daycare registration for their children**.

In particular, **the service automatically retrieves the information required for registration that is already on the Public Administration system** (such as the master data of the person submitting the application and the child to be enrolled, the list of family members, the ICEF statement, and previously submitted applications) **and checks for completeness and eligibility of the application** before it is submitted.

Innovative simplification tools such as guided completion features within the form that changes based on the information provided, help providing an explanation on information to be entered into

each field, and the ability to submit questions and get responses on unclear elements were introduced.
