

“The importance of communicating science” is the next Science Cafè

January 15, 2017

The next event of this series, scheduled for Wednesday, January 25, at 6.00 pm at the MUSE Science Museum is entitled "The importance of communicating science", and will feature Federico Taddia, tv writer and journalist for La Stampa and Radio24.

The “Research creates value” series of meetings continues with Federico Taddia on January 25 at 6:00 pm at the MUSE – Science Museum cafè.

“Research creates value” is a science cafè cycle for citizens organized by the Autonomous Province of Trento with MUSE – Science Museum, Fondazione Bruno Kessler, University of Trento, Fondazione Edmund Mach.

Improving people’s quality of life is one of the goals of scientific research and, by keeping this in mind, research creates value; in Trentino, high-level research is carried out in various fields and disciplines, thanks to a soil made fertile by investments, relationships and the presence of important organizations. Science cafès enable citizens to talk to researchers, explore research frontier areas and grasp its impact on daily life, ranging from health to social issues, biodiversity and science communication.
