

TrentinoSalute 4.0 on the national RAI TV network

December 3, 2018

A great opportunity to disseminate our activities: we were guests of the "Memex: Galileo" show

In episode 77, which was broadcast on **Rai Scuola** on November 14, 2018, **Valerio Rossi Albertini** met with **Stefano Forti**, Head of the Digital Health – Health and Wellbeing Laboratory of Trento-based Fondazione Bruno Kessler, who explained how the **TreC** platform, which provides online healthcare services, works: an ecosystem of applications and devices – in its real-world experimentation phase in Trentino – suitable to support citizens and their families in the daily management of their health. Mr. Forti also talked about the new “**TrentinoSalute ++**” **App** that encourages healthy lifestyles.

To watch the episode, recorded in the Rai studios in Via Teulada on May 16, just follow [this link](#) to #RaiPlay at below (Stefano Forti starts talking at minute 7?:34?).

Memex “Galileo” is Rai Cultura’s science and technology popularization magazine. It is the TV program that helps understand how and to what extent science affects our daily lives and what is the method behind the work of researchers all over the world. A program that intends to tell how every idea is the product of a long research work and of science and technology experimentation.
