

War and energy crisis: risks and opportunities

April 11, 2022

Giancarlo Sciascia talks with Luigi Crema, director of Fondazione Bruno Kessler's SUSTAINABLE ENERGY research center.

The scenario of **war** on Europe's doorstep that emerged at the end of February has immediate consequences in terms of political and economic choices.

The ongoing conflict is forcing an acceleration of European cooperation on a military level in the name of a principle of solidarity and to affirm a common sphere of security to be protected.

At the same time, this dynamic risks reducing the ambitious project of **ecological transition** of the Green Deal, the cornerstone of the guidelines of the European Commission led by Ursula von der Leyen.

In this new podcast episode of [Radio FBK – Scienza e Società](#), expert Luigi Crema addresses some crucial aspects that describe and help interpret the delicate historical transition we are experiencing:

- What are the factors that can bring a solution to understand where will **sustainable energy** end up in Europe?
- As for Italy, what are the **priorities for actions** that will facilitate the transition?
- What is the role of **information** that is polarized, fragmented and sometimes contradictory?
- How can **citizens** contribute to change through their behavior?
- What is **FBK's contribution** to support innovation in the energy supply chain?

Enjoy the [video](#) and the [talk](#)!
