# What fuels for the mobility of the future?

April 14, 2017

**On the occasion of the Trento edition of "Greenweek – Festival della Green Economy" in March, we collected the voices of three experts who testify how increrasingly urgent it is to invest in alternative fuels.**

**Luigi Crema**, FBK researcher and Scientific Coordinator of *scenario* Mobilità Idrogeno Italia, **Alberto Dossi**, president of Mobilità Idrogeno Italia and Gruppo SAPIO, and **Marco Barale**, Customer Director of Trenitalia Alstom Transport are some of the experts of the conference dedicated to **alternative fuels for the mobility of the future, hydrogen in particular**.

One of the organizers of this conference was **FBK's ARES (Applied Research on Energy Systems) research unit**, within the Center for materials and Microsystems of Fondazione Bruno Kessler in Trento, that deals with **energy systems**. "With this meeting" – **Crema** said – "we intend to discuss what has been done in Italy, what the existing gap is today compared to Italian regulations and send the message that hydrogen is today,  is now".

**Listen to the interviews (in the box to the right)**
